BENEFITS OF POLISHED CONCRETE

STANDS THE TEST OF TIME

Nearly impossible to chip or scratch, has the potential to last a century in harsh commercial environments.

NO VOC

Concrete floors do not contain harmful Volatile Organic Compounds (VOC) like hardwood, vinyl, and synthetic carpets.

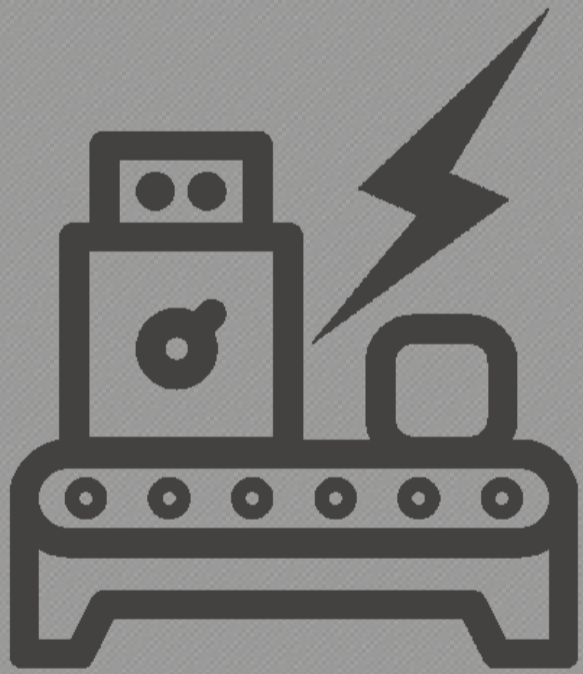

SAFETY FIRST

Concrete floors can be sealed with non-slip, chemical, and thermal shock resistance for extra protection.

HYGIENIC

When properly sealed, polished concrete can prevent contaminants from penetrating the flooring causing hazardous conditions.

STATIC FREE

Formulated additives included in coatings can ensure static discharge doesn't damage sensitive equipment.

MAINTENANCE

Dust or broom daily to prevent dirt accumulation. Wet mop removes smudging, scuffs, and water marks to restores gloss.

SAVINGS

Most installations are cost-effective, and if the upfront costs don't offer initial savings, the durability and lifespan of the floor will pay for itself -as concrete will likely never need replacing.

As the Northeast's leading industrial flooring experts, Black Bear can engineer the right solution for your business. Visit our website, or call us to schedule an on-site consultation.
