

EPOXY & POLISHED CONCRETE FLOORS  
**INSTALLATION & REPAIR**

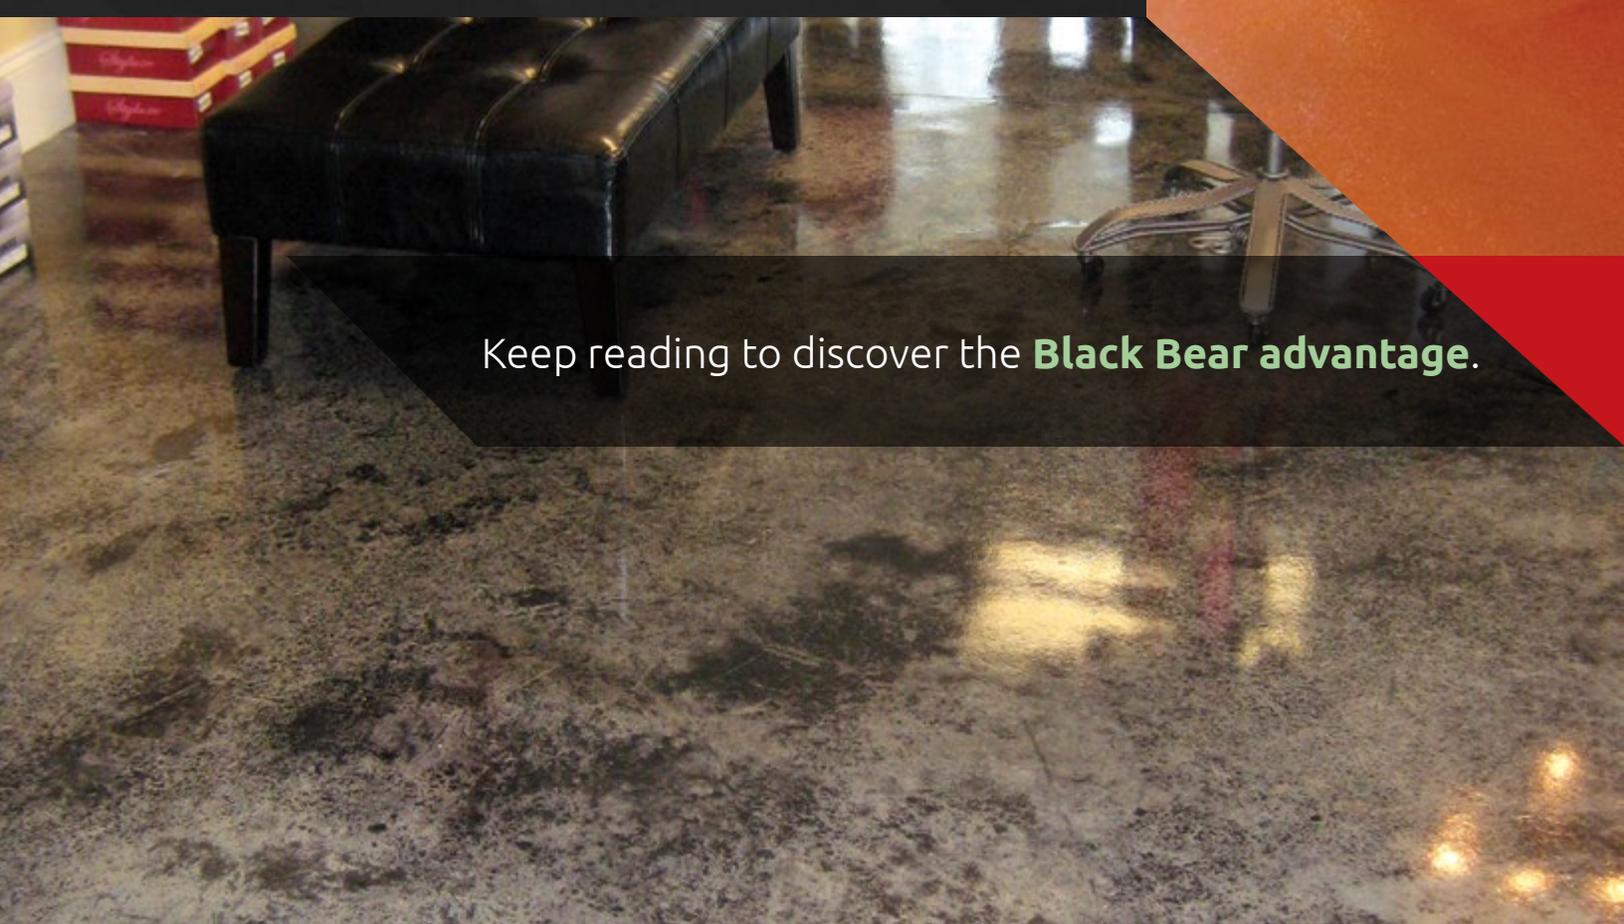

# Expect **PERFORMANCE**, Expect **RESULTS**

Designing and installing a solid flooring system is a multi-faceted process -- it requires an understanding of the facility's environmental conditions, how different flooring solutions will perform in the space, the potential impact on operations, and the organization's project goals and timeframes. Many options exist, but not all will fit your unique needs.

Are you ready to work with a company that understands results and the importance of exceeding expectations? **Look no further than Black Bear Coatings & Concrete**. We have installed, repaired, and maintained floors for some of New England's biggest companies. Black Bear Coatings & Concrete is the only vendor who can install and value engineer the best epoxy floors, coatings, and polished concrete, as well as resurface and repair existing concrete floors.

Keep reading to discover the **Black Bear advantage**.

## Trust the **EXPERTS**

**Unparalleled Expertise**

Unlike many of our competitors, Black Bear Coatings & Concrete is skilled at epoxy and specialty coatings, polished concrete, concrete resurfacing, and most importantly concrete surface prep. There's no need to coordinate multiple vendors, our team can address all your needs.

**A Team-Approach to Value Engineering Solutions**

Black Bear Coatings & Concrete partners with clients to understand their unique environmental conditions, as well as requirements related to business operations, project timeframes, and budgets. We identify the best flooring solutions for each situation.

**Experience in Multiple Industries**

We have worked in many industries and collaborated with facilities managers, general contractors, designers and architects to implement flooring applications. We understand the industry-specific demands seen in manufacturing, healthcare, restaurants and food service, pharmaceuticals, and more.

## Areas in your facility where Black Bear Coatings & Concrete can help...

Aircraft Hangers

Containment Areas

Locker Rooms

Pharmacies

Show Rooms

Assembly Areas

Control Rooms

Machine Shops

Pool Decks

Splash/Spill Zones

Chemical Storage

In-plant Cafeterias

Maintenance Shops

Reception Areas

Storage Areas

Clean Rooms

Labs

Mechanical Rooms

Rest Rooms

Traffic Aisles

Commercial Kitchens

Loading Docks

Operating Rooms

Retail Areas

# Our Know-How Makes **THE DIFFERENCE**

Black Bear Coatings & Concrete offers a full array of coatings and installation options to meet every situation. Whether your needs are an industrial floor that can handle extreme wear and tear, or one that has a decorative touch, our know-how makes the difference.

**Epoxy & Specialty Coatings:** Epoxy flooring has quickly become the industry standard for the majority of Industrial and Commercial spaces. Durable, long lasting epoxy flooring is a cost efficient way of providing an aesthetically pleasing workspace for both guests and employees. As experts, we have dedicated ourselves to understanding every aspect of epoxy flooring, including customizations. Let us help you figure out what system will best fit your environment.

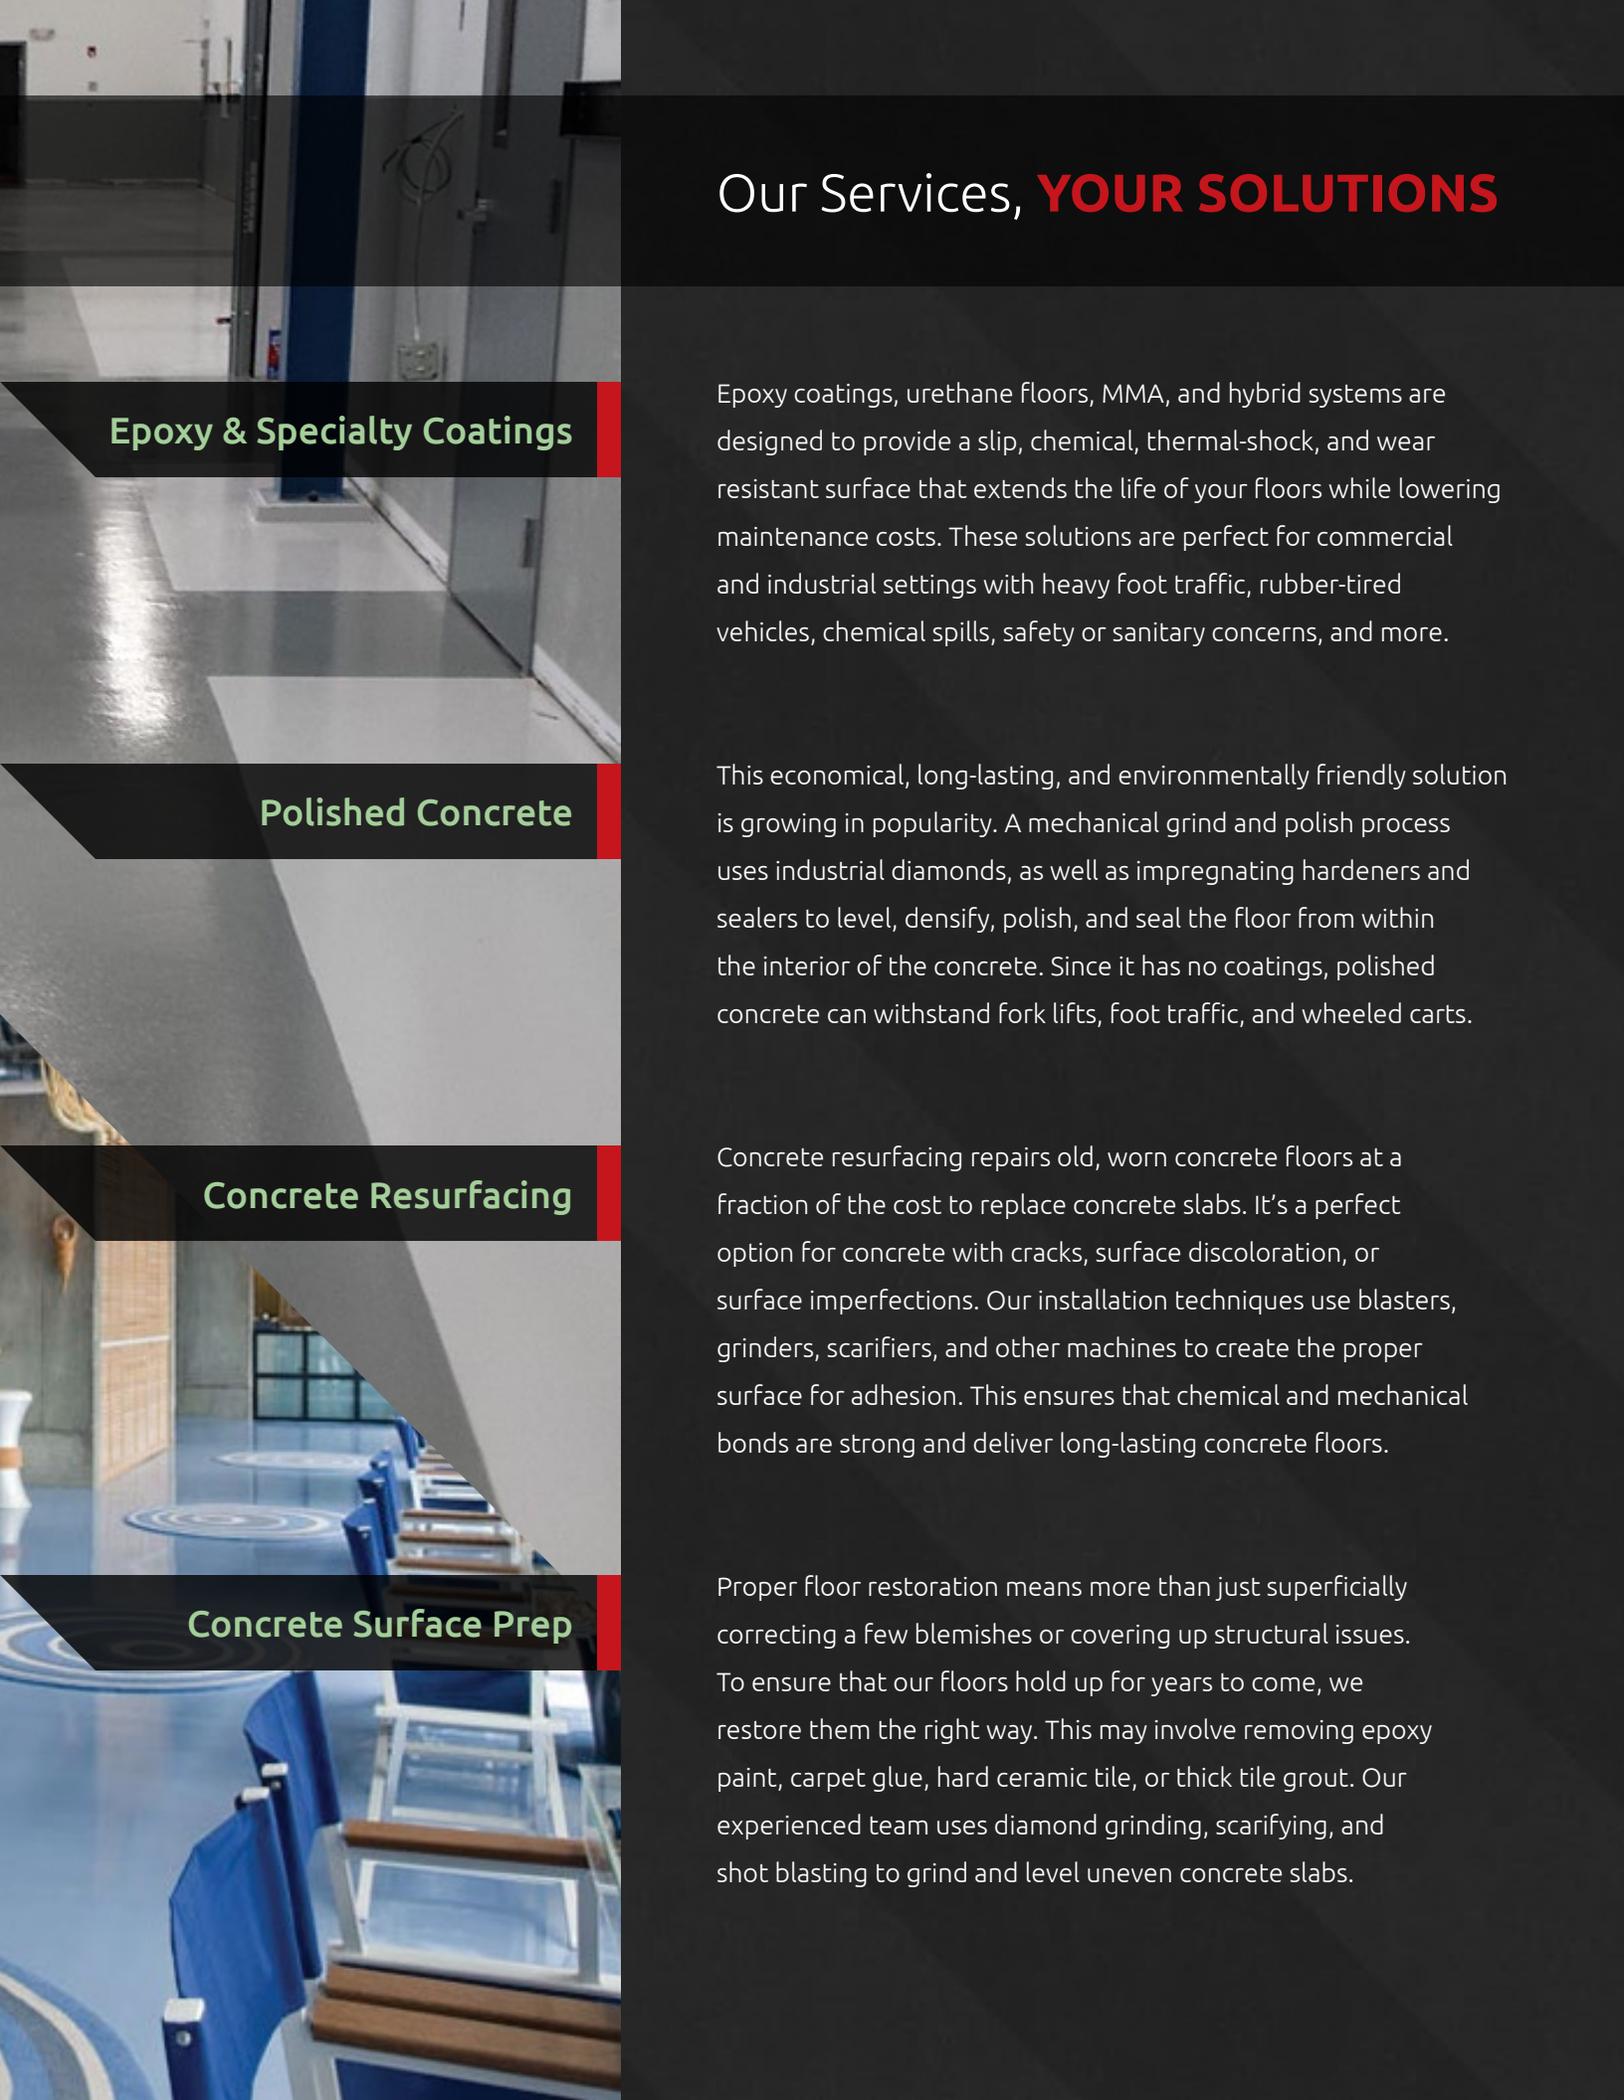

**Polished Concrete:** Concrete polishing can breathe new life into your old, dingy concrete flooring. If the flooring in your commercial or industrial workplace looks boring, drab, scuffed, or marked we can make it look like new with our multi-step process that involves polishing and sealing your substrate. Our concrete polishing services create a long-lasting sheen that will have your floors looking brand new again. Additionally, our polishing process also makes old and tired terrazzo look like new again, Black Bear terrazzo floor restorations are second to none. We can determine whether this alternative is right for your site.

Rather than tearing out and replacing worn concrete, Black Bear Coatings & Concrete can **resurface** them at a fraction of the cost.

With all floor restoration projects, **concrete surface prep** is essential. To make sure that surface preparation is done right, Black Bear Coatings & Concrete uses its own highly trained and experienced employees to perform this work on all projects.

Regardless of which solution you choose, our techniques and specialized equipment help reduce project costs and mitigate business downtime.

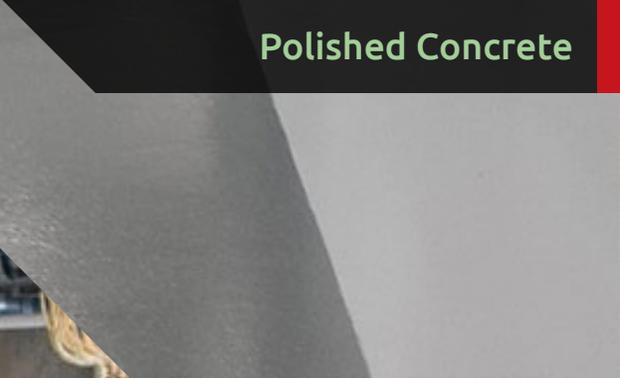

## Our Services, **YOUR SOLUTIONS**

### Epoxy & Specialty Coatings

Epoxy coatings, urethane floors, MMA, and hybrid systems are designed to provide a slip, chemical, thermal-shock, and wear resistant surface that extends the life of your floors while lowering maintenance costs. These solutions are perfect for commercial and industrial settings with heavy foot traffic, rubber-tired vehicles, chemical spills, safety or sanitary concerns, and more.

### Polished Concrete

This economical, long-lasting, and environmentally friendly solution is growing in popularity. A mechanical grind and polish process uses industrial diamonds, as well as impregnating hardeners and sealers to level, densify, polish, and seal the floor from within the interior of the concrete. Since it has no coatings, polished concrete can withstand fork lifts, foot traffic, and wheeled carts.

### Concrete Resurfacing

Concrete resurfacing repairs old, worn concrete floors at a fraction of the cost to replace concrete slabs. It's a perfect option for concrete with cracks, surface discoloration, or surface imperfections. Our installation techniques use blasters, grinders, scarifiers, and other machines to create the proper surface for adhesion. This ensures that chemical and mechanical bonds are strong and deliver long-lasting concrete floors.

### Concrete Surface Prep

Proper floor restoration means more than just superficially correcting a few blemishes or covering up structural issues. To ensure that our floors hold up for years to come, we restore them the right way. This may involve removing epoxy paint, carpet glue, hard ceramic tile, or thick tile grout. Our experienced team uses diamond grinding, scarifying, and shot blasting to grind and level uneven concrete slabs.

# We Understand **YOUR INDUSTRY**

Black Bear Coatings & Concrete has worked with clients in many industries. We understand the industry-specific demands that are placed on flooring and can advise you on whether a coating or new flooring will work best for your environment and business conditions.

In some industries, like food and beverage manufacturing, flooring surfaces must withstand aggressive wash downs. In other sectors, like healthcare, constant traffic requires rugged, slip-resistant floors. Some industries demand specialized installation practices, such as HEPA filtering to reduce dust levels. We've met the challenges of many different environments and we can help you with yours.

# We can **VALUE ENGINEER** Solutions for You

Black Bear Coatings & Concrete has helped companies of all sizes across a range of industries with their flooring needs.

Flooring in these facilities must withstand aggressive chemical and high temperature wash downs. Our team is well-versed in chemical resistant coatings, secondary containment, and slip resistant surfaces that will be durable under heavy traffic and constant impact.

These sites face constant 24-hour a day foot traffic, as well as carts, beds, and medical equipment. Black Bear has installed low maintenance, slip-resistant and sanitary flooring solutions in clinics, hospitals, operating rooms, labs, and long-term care facilities.

This industry needs attractive stain and wear resistant flooring in dining areas, while food prep areas must have sanitary, non-slip surfaces for employees. Our team has experience with thermal shock-resistant flooring that will withstand high temperature cleaning, as well as low maintenance, decorative walkways and dining room floors.

At manufacturing sites, floors take abuse from foot traffic, machinery, and tire treads. Black Bear's slip-resistant, non-skid flooring options can handle heavy equipment and traffic. We are also knowledgeable about special flooring needs, such as thermal shock reduction and electrostatic dissipation.

For pharmaceutical customers, our certified contractors understand GMP practices, dust control, gowning requirements, and the need to use HEPA filtered equipment to minimize environmental impact.

Black Bear specializes in parking garage floors and has a wide range of experience with solutions that are resistant to abrasion, slipping, oil, gasoline, chlorides, and other chemicals. We work around traffic schedules and often schedule work at nights or on weekends, if necessary.
